DEVELOPMENT METHODOLOGY

Agile method is a fast and responsive software development method. It comprises of incremental and iterative software development models. The development process takes part in the form of iterations where there is a lot of scope in revising the product build and to add on new requirements and changes to be made. This helps to include the evolving changes from the clients business to the project strategized.

- Well Planned and designed process

- Working software is delivered from the early stages.

- Modules are bifurcated into small sections and developed.

- Incorporates the changes in late development phase as well.

- Continuous and close communication between clients and developers.

- Technically strong and good design are key features.

Agile

CI   CD

TDD

PROJECT MANAGEMENT

- We use JIRA for Project Management and Issue Tracking which is accessible to the offshore team and client.

- Our teams and clients have the centralized access to the JIRA which helps in transparency and better control of the project development process.

- As per the requirements and availability of the clients, we use Skype, Google Hangouts, Team Viewer and many more for better and flexible client communication.

- We use and recommend Goto meeting for confernce calls with clients.

- Daily or Weekly Scrum meetings are setup based on project requirement and complexity.
